

Beijing online consultation guide

A practical path from MRI files to three real specialist opinions for Yujie's adult tethered-cord / lipoma case.

MY RECOMMENDATION

Cui Zhiqiang is the strongest disease-specific first opinion on the public evidence—but he should not be the only opinion.

Submit the same packet to Cui Zhiqiang, Wu Hao and Chen Zan concurrently through Haodf. If you must choose only one first, choose Cui.

BEST CASE FIT

Cui Zhiqiang

Yuquan. Official profile reports 1,000+ tethered-cord operations and work specifically on lipoma-type tethering.

INSTITUTIONAL DEPTH

Chen Zan

Xuanwu neuro-spine centre. Official profile specifically describes surgical treatment of tethered cord.

ACTIVE SPECIALIST

Wu Hao

Xuanwu. Current official clinics and active online tethered-cord consultations.

The target outcome is not an online promise of surgery. We need a written view on whether Yujie should travel for in-person assessment, what testing is required first, and which clinic should see her.

1

Set up access

- Use **Yujie's own real-name Haodf account**.
- Prefer a working mainland Chinese mobile number for SMS verification and later hospital calls.
- Keep access to the account, mobile number and verification codes available to Yujie.
- Do not create the clinical record under a parent's identity.

Open these three verified doctor pages

Cui Zhiqiang · Yuquan Hospital

haodf.com/doctor/275126.html

Wu Hao · Xuanwu Hospital

haodf.com/doctor/246149.html

Chen Zan · Xuanwu Hospital

haodf.com/doctor/188137.html

2

Build one clinical packet

1. Complete current MRI **DICOM** study.
2. Current radiology report.
3. Earlier MRI DICOM and report, if available.
4. One-page Chinese symptom timeline.
5. Current medicines, allergies, previous operations and major conditions.
6. The consultation questions on page 4.

Do not send only screenshots. Keep the entire original DICOM study unchanged.

Symptom timeline headings

- First symptoms and date
- Pain and triggers
- Weakness and progression
- Numbness/sensation
- Walking/balance
- Bladder symptoms
- Bowel symptoms
- Saddle/sexual changes
- Dermal-sinus drainage or infection
- Current functional limits

3 Upload the MRI correctly

1. Insert the MRI disc into a computer.
2. Copy the **entire disc contents** into one new folder.
3. Do not rename, delete or reorganise the DICOM files.
4. Compress the complete folder as a ZIP file.
5. Sign in to Haodf and use dicom.haodf.com.
6. Confirm that the study appears under Yujie's account.
7. Attach the radiology report as a clear PDF or image.
8. Keep the physical disc for the Beijing clinic.

If the upload fails: do not replace the study with a few screenshots and assume the surgeon saw everything. Resolve the upload or ask the doctor's assistant for the accepted transfer method.

4 Open all three consultations

On each doctor page:

1. Confirm the doctor's hospital and specialty.
2. Select **Online Consultation** / 图文问诊.
3. Enter the same concise clinical summary.
4. Attach the same DICOM study, reports and timeline.
5. Paste the same seven questions.
6. Submit and save the receipt and consultation number.
7. Record the response window shown by Haodf.

DO THIS CONCURRENTLY

Submit all three on the same day. Do not wait for one reply before opening the next consultation.

Chinese consultation message

Replace every bracketed field. Paste the same completed message into all three consultations.

MESSAGE TEMPLATE

医生您好：

患者[姓名]，女，[年龄]岁，中国公民，大连户籍，目前居住在澳大利亚。

主要问题：[用两三句话说明主要症状和进展。]

影像情况：[填写MRI日期和报告的主要结论。] 我们已经上传完整的MRI DICOM文件、影像报告和症状时间线。

想请您协助判断：

1. 从现有影像和症状看，是否符合有症状的成人脊髓拴系，以及脂肪瘤／皮毛窦相关病变？
2. 您是否建议患者近期到贵院面诊，评估是否需要手术？
3. 如建议面诊，应预约您本人还是其他专门门诊？您的团队能否协助安排加号或合适的门诊？
4. 来中国前还需要完成哪些检查？
5. 如果考虑手术，初步可能是哪一种术式：单纯松解、脂肪瘤减容、皮毛窦切除，还是其他方案？
6. 目前大概的住院排期、预交金、住院时间和需要在北京恢复的时间是多少？
7. 如果恢复顺利，一般何时可以乘坐长途国际航班？哪些情况会推迟乘机？

我们理解线上问诊不能代替面诊，也不能保证手术。现阶段最需要确认的是：是否值得专程到贵院面诊，以及出发前需要准备什么。

谢谢医生。

5

Compare clinical reasoning

Record for each surgeon	What matters
Clinical reasoning	Did they address the actual MRI, symptoms and uncertainty?
Travel recommendation	Do they recommend an in-person assessment?
Missing tests	What should be completed before travel?
Clinic path	Which clinic/surgeon, and will the team help arrange it?
Surgical plausibility	Plausible, unlikely, or undecidable before examination?
Timing and cost	Are any estimates clearly described as provisional?

STRONG REPLY

Explains reasoning, identifies missing information, recommends or declines an in-person review, and gives a concrete clinic next step.

WEAK REPLY

Only says "come to clinic", promises surgery from scans, or gives cost/timing without addressing anatomy and deficits.

6

Make the travel decision

Travel only if at least one named surgeon or team says the case warrants in-person assessment.

- Obtain the clinic date and booking confirmation.
- Ask what tests should be completed before departure.
- Confirm original imaging and identity documents to bring.
- Plan the first trip as **consultation and work-up**, not guaranteed surgery.
- Use changeable travel arrangements where possible.

Do not book a surgery-length stay or fixed post-operative return flight from the online consultation alone.

7

Identify the insurance product

Ask Yujie's parents for:

- Exact product name and issuing authority or insurer.
- Enrolment and payment receipts.
- Screenshot showing the active benefit date.
- Policy wording and exclusions if commercial insurance.

After selecting the likely hospital, ask Dalian medical insurance / **12393** to confirm active coverage, cross-province filing, direct settlement, deductible, reimbursement percentage and expected self-pay items.

Do not rely on “higher-tier insurance with a one-month wait” without the actual product documents.

Completion checklist

- | | |
|---|--|
| ☐ Yujie's real-name Haodf account works. | ☐ Chen Zan consultation submitted. |
| ☐ Mainland mobile and SMS access works. | ☐ Receipts and consultation numbers saved. |
| ☐ Full DICOM study is uploaded and visible. | ☐ Replies compared in one table. |
| ☐ Reports and Chinese symptom timeline attached. | ☐ Insurance product identified from documents. |
| ☐ Cui Zhiqiang consultation submitted. | ☐ No travel booked before a named team recommends assessment. |
| ☐ Wu Hao consultation submitted. | |

THE LINE WE DO NOT CROSS

Online consultation is triage, not surgical acceptance. Bed timing, case-specific cost, hospital stay and flight clearance become real only after in-person assessment and an admission plan.
