Male Hormone Check

Summary

Shane, congratulations on taking the Male Hormone Check which puts you in control of your health data!

Dr Kim Cheah

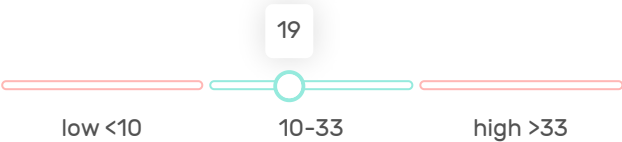

Collection Date: 31 Aug 2017

Male Hormone Panel

Your hormone levels are all within the normal range and don't show signs of an imbalance.

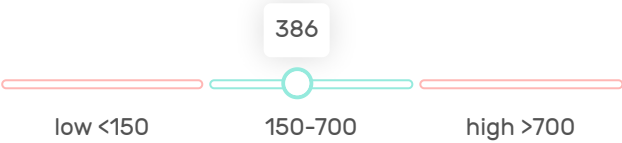

Testosterone 19 nmol/L

An anabolic hormone responsible for bone and muscle strength, as well as mood, energy and sexual function.

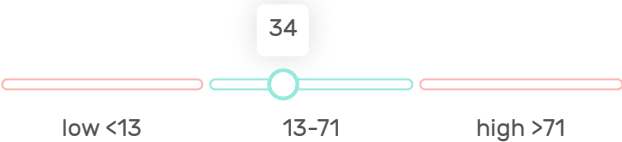

Free Testosterone 386 pmol/L

Most testosterone is strongly bound to sex hormone binding globulin (SHBG). This test measures the proportion of unbound testosterone which is available to the body's tissues.

SHBG 34 nmol/L

Sex Hormone Binding Globulin (SHBG) is a protein that binds tightly to testosterone and oestradiol. Changes in SHBG levels can affect the amount of hormone that is available to be used by the body's tissues.

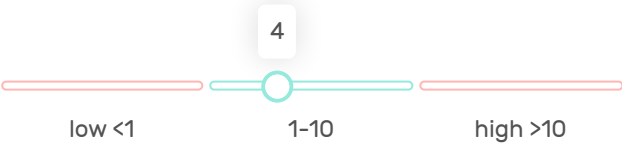

FSH 10 IU/L

Levels of follicle stimulating hormone in men rise with age, but can also indicate testicular damage and reduced sperm production. Low levels of FSH are detected when men are not producing sperm.

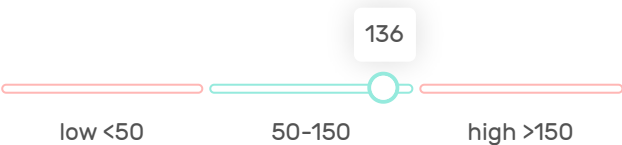

LH 4 IU/L

Luteinising hormone is responsible for stimulating testosterone production and sperm generation. Raised LH can signal that the testes are not producing enough testosterone and is relevant when evaluating hypogonadism.

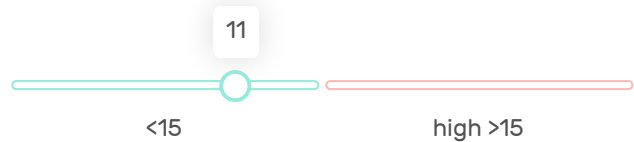

Oestradiol 136 pmol/L

The principle active form of oestrogen in the body which has roles in gynecomastia, water/fat retention and hormone balance.

Prolactin 11 ug/L

A hormone which is produced in the pituitary gland and plays a role in reproductive health. Raised levels in men can cause reduced sex drive, lack of energy, erectile dysfunction and fertility problems.

Recommendations

Update your health profile for more advice

It isn't clear from your health profile whether you're experiencing hormone imbalance related symptoms such as insomnia, anxiety, fatigue and loss of libido, which have prompted you to take this check. If you have signs of a hormone imbalance then you may wish to consider our Thyroid Check or Adrenal Fatigue Check.

Check in with your GP

As always, please visit your GP if you are experiencing any worrying signs or symptoms. This service is designed to keep you informed, however it does not replace regular visits to your local GP.
